

CMS WORKSHOP LECTURES

Volume 19

**ADVANCED APPLICATIONS
OF SYNCHROTRON
RADIATION IN CLAY SCIENCE**

THE CLAY MINERALS SOCIETY

Joseph W. Stucki, Series Editor and Editor in Chief
University of Illinois
Urbana, IL 61801-4798, USA

Glenn A. Waychunas, Volume Editor
Earth Sciences Division, Lawrence Berkeley National Laboratory,
Berkeley, CA 94720, USA

Contents

Chapter 1. Introduction to synchrotron radiation 1 by **GLENN A. WAYCHUNAS**

1. X-ray sources – short history	1
1.1 Vacuum-tube high-voltage sources	1
1.2 First-generation synchrotrons and spectrum	2
1.3 Wigglers, undulators, and their spectrum	5
2. Beam parameters	11
2.1 Beam brightness and flux	11
2.2 Polarization	11
2.3 Beam coherency	11
2.4 Pulse structure and modes of operation	13
3. New lattices and FELs (LCLS).....	14
3.1 Lattices.....	14
3.2 FELs.....	15
4. Synchrotron operation considerations	15
4.1 Injection	15
4.2 Long-term beam stability	16
5. Important beamline elements	16
5.1 Monochromators and mirrors	16
5.2 Zone-plate optics	20
6. Types of experiments (and capabilities)	21
6.1 X-ray scattering	21
6.1.1 Powder diffraction (high resolution)	21
6.1.2 Diffuse scattering from poorly crystalline materials, PDF measurements	22
6.1.3 Single-crystal diffraction (small size)	22
6.1.4 Small-angle X-ray scattering (SAXS) (flux and brilliance)	22
6.1.5 Grazing Incidence diffraction and reflectivity (brilliance).....	22
6.2 X-ray spectroscopy	23
6.2.1 X-ray absorption spectroscopy	23
6.2.2 X-ray microprobe (X-ray emission).....	24
6.2.3 Grazing-incidence X-ray fluorescence and X-ray standing wave approaches	24
6.2.4 X-ray spectromicroscopy and nanoprobe.....	24
6.3 Imaging modes	27
6.3.1 Phase contrast	27
6.3.2 X-ray tomography.....	28
7. Sources in the US and access	28
7.1 The US DOE sources	28
7.2 User support (scientists and technologists).....	29
7.3 Choosing beamlines for experiments	29

Acknowledgements.....	30
References.....	31

Chapter 2. Synchrotron powder diffraction methods and refinement techniques.....33

by JOHN B. PARISE, WILLIAM R. WOERNER and REINHARD B. NEDER

1. Introduction and historical perspective.....	33
2. Coherent elastic scattering.....	37
3. Small-angle scattering.....	40
4. Time-resolved SAS.....	43
5. WAXS from geo-nanoparticles.....	44
6. Prospects for whole nanoparticle refinement.....	47
7. Sample environments.....	52
8. Versatile high-temperature sample stages.....	52
9. Cells for studies of fluid–solid interactions.....	53
10. Acoustic levitation.....	56
11. Prospects for <i>in situ</i> and time-resolved studies.....	57
Acknowledgements.....	60
References.....	60

Chapter 3. Atomic-scale structure of substantially disordered minerals by high-energy X-ray diffraction and atomic pair distribution function analysis.....69

by VALERI PETKOV

1. Introduction.....	69
2. Principles of the atomic PDF method.....	71
3. Practical aspects of high-energy XRD aimed at atomic PDF Analysis.....	73
3.1. Source of X-ray radiation.....	73
3.2. XRD data statistics and collection time.....	74
3.3. Experimental set-up (<i>Q</i> -space) resolution.....	75
3.4. Background scattering treatment.....	76
3.5. Sample-related ‘unwanted’ scattering.....	77
3.6. High-energy XRD data processing into atomic PDFs.....	78
4. Structural information that can be extracted from atomic PDFs.....	78
5. Conclusions.....	86
Acknowledgements.....	86
References.....	86

Chapter 4. Total scattering studies of natural and synthetic ferrihydrite.....89by **F. MARC MICHEL**

1. Introduction	89
2. Common occurrences and importance of ferrihydrite	91
3. Total scattering and the pair distribution function	92
3.1. Total scattering methodology.....	92
3.2. The pair distribution function.....	93
3.3. Other terms and concepts.....	95
3.3.1. Coherent scattering domain size	95
3.3.2. Short-, intermediate-, and long-range order	98
3.3.3. Extracting information from the PDF: Real-space fitting	100
4. Studies of pure synthetic ferrihydrite	101
4.1. Laboratory XRD-based scattering	101
4.2. Synchrotron total scattering	103
4.2.1. Laboratory ferrihydrite	103
4.2.2. Ferrihydrite transformations	106
4.2.3. Ferritin-derived ferrihydrite.....	112
4.3. Neutron total scattering	113
5. Studies of impure synthetic ferrihydrite	115
5.1. Mixed $\text{Cr}_x\text{Fe}_{1-x}$ -(oxy)hydroxides.....	116
5.2. Aluminous ferrihydrite	118
5.3. Fe^{3+} oxide/silica co-precipitates	120
5.4. Arsenious ferrihydrite.....	121
5.5. Arsenate-sorbed ferrihydrite.....	122
6. Recent studies and new data for natural ferrihydrite	123
7. Summary and future work.....	129
Acknowledgements.....	131
References.....	131

Chapter 5. Introduction to computed microtomography and applications in Earth science.....137by **MARK L. RIVERS**

1. Introduction to computed tomography	137
1.1. Overview.....	137
1.2. Microtomography	138
1.3. Laboratory X-ray sources.....	140
1.4. Synchrotron X-ray sources	140
1.5. Detectors	141
1.6. Computers.....	142
2. Absorption tomography	142
2.1. X-ray energy and sample size	142
2.2. Data collection	143

2.3. Data normalization	145
2.4. Sinograms	146
2.5. Reconstruction	147
2.6. Spatial resolution	151
2.6.1. Source size	151
2.6.2. Sample and detector size	152
2.6.3. Visible-light diffraction limit	153
2.6.4. Scintillator limits	153
2.6.5. Rotation stage limits	153
2.7. Contrast resolution	154
3. Differential absorption tomography	154
4. Phase-contrast tomography	155
5. Fluorescence tomography	158
6. Diffraction tomography	160
7. Applications of tomography in Earth sciences	162
7.1. Fluids in porous media	162
7.2. Soils	163
7.3. Other applications	163
Acknowledgments	164
References	164

Chapter 6. X-ray absorption fine-structure spectroscopy167
 by MATTHEW NEWVILLE

1. Introduction	167
2. X-ray absorption and fluorescence	169
3. A simple theoretical description of XAFS	174
3.1. The EXAFS equation	176
4. XAFS measurements: transmission and fluorescence.....	180
4.1. Transmission XAFS measurements	183
4.2. Fluorescence XAFS measurements	184
4.2.1. Dead time	185
4.2.2. Complicated	185
5. XAFS data reduction	186
5.1. Pre-edge subtraction and normalization.....	187
5.2. Background subtraction	189
5.3. EXAFS Fourier transforms.....	190
6. XAFS data modeling.....	193
6.1. Running and using <i>FEFF</i> for EXAFS calculations.....	193
6.2. First-shell fitting	194
6.3. Second-shell fitting.....	196
7. Interpretation of XANES.....	197
References.....	200

Chapter 7. Application of hard X-ray microprobe methods to clay-rich materials203
by ANTONIO LANZIROTTI

1. Introduction	203
2. Overview of instrumentation.....	204
2.1. X-ray fluorescence	209
2.2. Micro-focused X-ray absorption spectroscopy	216
2.3. Micro-focused X-ray diffraction	220
3. Examples	222
3.1. Characterizing geosynthetic clay liners	222
3.2. Uranium speciation in contaminated Hanford sediments	223
3.3. Nickel sequestration in soil ferromanganese nodules	225
3.4. Direct visualization of oriented mesostructures in clay gels.....	225
3.5. Strontium speciation during reaction of kaolinite with simulated tank-waste leachate.....	226
Acknowledgements.....	228
References.....	228

Chapter 8. Applications of scanning transmission X-ray microscopy in studying clays and their chemical interactions231
by SATISH C.B. MYNENI, BHOOPESH MISHRA, MICHAEL B. HAY

1. Introduction	231
2. Scanning transmission X-ray microscopy: introduction and instrumentation details	232
2.1. Detection limits.....	235
2.2. Imaging of samples	236
2.3. Limitations of STXM.....	236
3. Applications of STXM in studies of clay minerals	237
3.1. Detection of clay minerals using STXM	237
3.2. Structural evaluation of clay minerals using STXM and Al-XANES.....	238
3.3. Sorption of Al on mineral surfaces and neoformation of clays	241
4. Case studies of STXM on inorganic colloids.....	244
4.1. STXM studies of inorganic colloids and biominerals	244
5. STXM studies on organic colloids	250
5.1. Mapping and detecting organic colloids using STXM	250
5.2. STXM studies on the functional group composition of organic molecules in colloids.....	251
5.3. STXM studies on the chemical characteristics of biofilms and bacterial cell membranes.....	252

5.4. Limitations of STXM for organic molecule studies	254
5.5. Distribution of metals in bacterial and planktonic suspensions	255
6. Summary and future directions	257
Acknowledgements.....	257
References.....	258
